YouTube - Wikis in Plain English

Video Share Plugin Example

The Video Share Plugin is embedded using the video share parameters. The file to embed, the dimension of the flash object and the alignment has to be given space separated in the opening tag. Name-Value pairs for the parameters are then given in the body. Supported alignments are left, center and default. Below is an example using a YouTube Video. **HIT WEBPAGE BACK ARROW TO RETURN TO THIS PAGE.**

[WIKIS in Plain English](#)

Usage/Syntax for the above example is as follows: The basic syntax looks like this: **START WITH 2 { videosite>videoid?parameter1¶meter2|title AND END WITH 2 }** [Video Share Plugin](#) (Note: clicking on this link will result in leaving this page unless you open it in another tab or window.)

- Where videosite is one of the identifiers listed in Supported Services chapter
- and videoid is the identifier of the video at the respective site
- The parameters are optional. You start these with a ? and separate more of them by a &. Look in Parameters chapter
- The title is optional as well. Look in Examples chapter
- The video can be aligned by adding spaces on the left or right inside the curly brackets (like in the image syntax). Look in Examples chapter
